

INSTRUCTIONS

- PUMP MACHINE

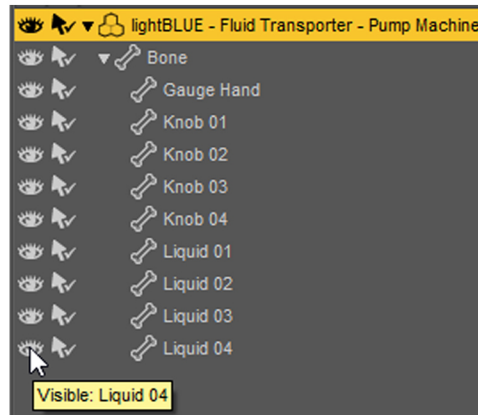

Load the Pump Machine with nothing selected in the scene.
Use the first bone to position the machine where you like.

Use the sliders to pose the knobs and gauge handle, and to adjust the level of the liquids.
To use the sliders select the prop and go to the Parameters Tab/General.

Switch off/on the visibility of each liquid by clicking on its "eye" icon in the scene hierarchy or by moving its level slider to 100%.

There are 4 materials for each of the 4 liquids in the machine. Each of them is applied separately so you can use different materials for each liquid.

It also has the Lights ON/OFF presets.

Apply them with the Pump Machine selected in the scene.

- HOSE

The Hose can be loaded independently in the scene if you want to pose it manually.

POSITION ON WHICH THE HOSE WILL BE LOADED IS MARKED WITH A GREEN ARROW ON EACH ICON

There are also available wearable presets for the Hose on the Pump Machine. Each of these 8 presets will load the Hose attached to one of the 8 predefined hose positions on the Pump Machine. Select the Pump Machine to apply them, the Hose will be automatically parented to the selected Pump Machine.

The Hose has 75 bones that you can select and manipulate manually, but you can also pose the Hose using the easy pose sliders. To use the sliders select the prop, go to the Parameters Tab/General.

INSTRUCTIONS

- INJECTOR

Load the Injector with the Hose selected in the scene.
The Injector will be automatically parented to the last bone of the hose.
The best way to manipulate the parented Injector is by manipulating the last bone of the Hose (Bone 75).
It is also possible to use the Injector as a separate prop if you load it with nothing selected in the scene.

- EXTRACTOR

Load the Extractor with the Hose selected in the scene.
The Extractor will be automatically parented to the last bone of the hose.

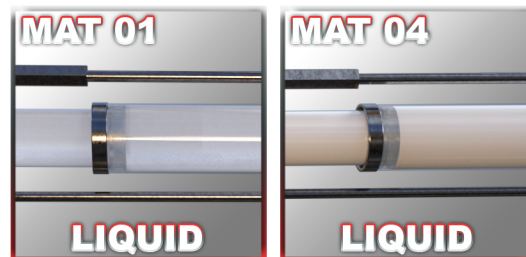

The best way to manipulate the parented Extractor is by manipulating the last bone of the Hose.

IMPORTANT - If you want to scale the parented Extractor, scale the last bone of the Hose (Bone 75)!
If you scale the Extractor itself, and not the last bone of the Hose, the Extractor will not be positioned correctly on the Hose and you will need to correct its position manually, also the diameter of the hose might not be correct for the scaled Extractor.

The Extractor has a slider for retraction of its moving part,
to use the slider select the prop, go to the Parameters Tab/General.

The liquid in the Extractor has 4 material presets
to match the liquids in the Pump Machine.
You can also switch off/on the visibility of the liquid
by clicking on its "eye" icon in the scene hierarchy.

It is also possible to use the Extractor as a separate prop if you load it with nothing selected in the scene.

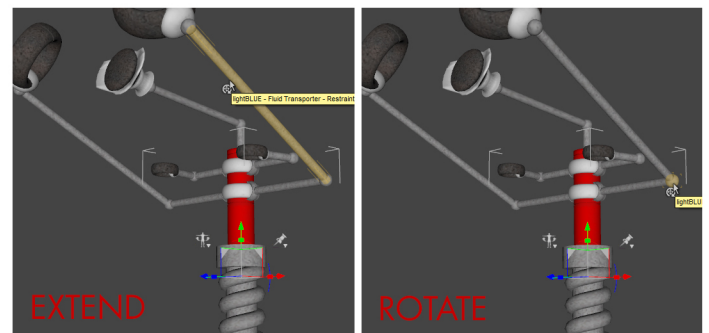

- RESTRAINT MACHINE

Load the Restraint Machine with
nothing selected in the scene.
Use the first bone to position
the machine where you like.

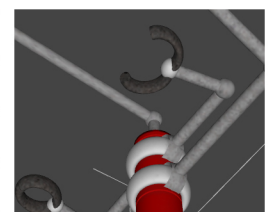

All bones of the machine have a selection group
so you can easily select them in the scene.

Use the spherical joints for rotation
and adjust the length of the bars as needed.

Use the sliders to open the arm and leg restraints.
To use these sliders select the prop,
go to the Parameters Tab/General.

INSTRUCTIONS

– BONUS POSES:

Load the Pump Machine and with the machine selected load the Pump Machine Pose.

Also with the Pump Machine selected load the Hose - Position 01 L and Hose - position 01 R presets. Select the Hose on the left side and load the Hose 01 Pose, select the Hose on the right and load the Hose 02 Pose.

Select the Hose on the left and load the Extractor prop, with the Extractor prop selected load the Extractor Pose.

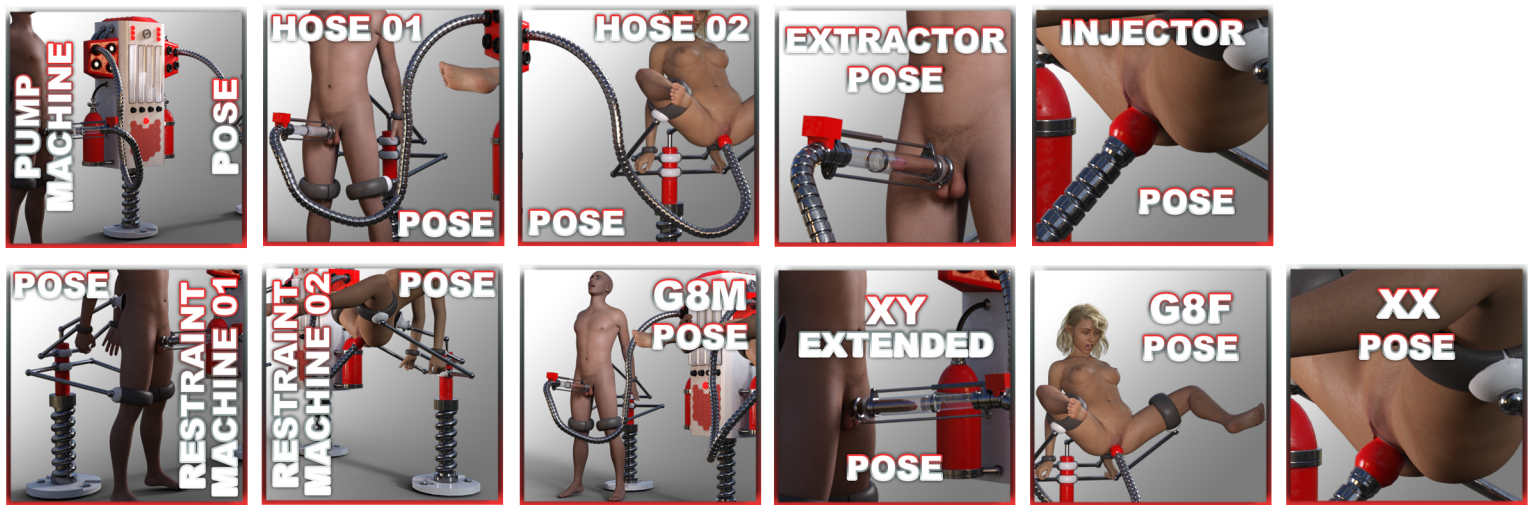

Select the Hose on the right and load the Injector prop, with the Injector prop selected load the Injector Pose.

Load the Restraint Machine with nothing selected, select it and load the Restraint Machine 01 Pose,

load another Restraint Machine with nothing selected, select that one and load the Restraint Machine 02 Pose.

Load the G8M, apply the XY Extended genitalia, with G8M selected load the G8M Pose, and with the XY Extended selected load the XY Extended Pose.

Load the G8F, apply the XX genitalia, with G8F selected load the G8F Pose, and with the XX selected load the XX Pose.

– MATERIALS

Each prop has its own material presets.

Make sure to load the material preset with the right prop selected in the scene.

Each of the liquids has its own material presets.

Check the icons of the liquid material presets for the Pump Machine to see which liquid they are for.

To apply materials for the liquids of the Pump Machine select the Pump Machine and to apply the materials for the Extractor liquid select the Extractor.

Materials for each prop are separated into folders for easier use.
