

# FutalateX for G9 ~~Tutorial~~

## 1- What is FutalateX for G9?

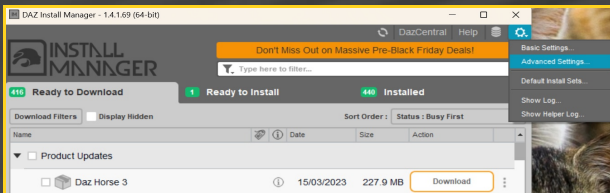

FutalateX is a set of condoms for the Genesis 9 figure's grafts: DickTator and Double Dangers. The set comes complete with texture, shaping and cum options.

The set also features standalone condoms and used condoms that can be loaded as G9 followers.

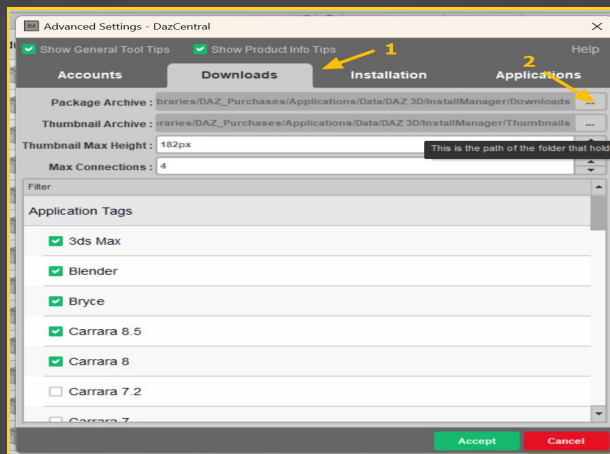

## 2 - How to install it?

### A - Using DAZ Installation Manager

1: Open DIM, select "Advanced settings";

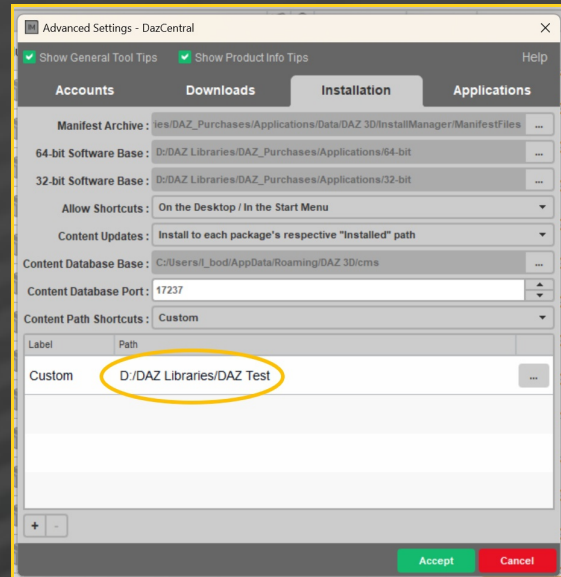

2: Check the Downloads tab (1), locate the download directory (2);

3: Browse to this very directory, drag and drop the .zip and .dsx files you downloaded from Renderotica (if you use a MAC don't click Return or Replace);

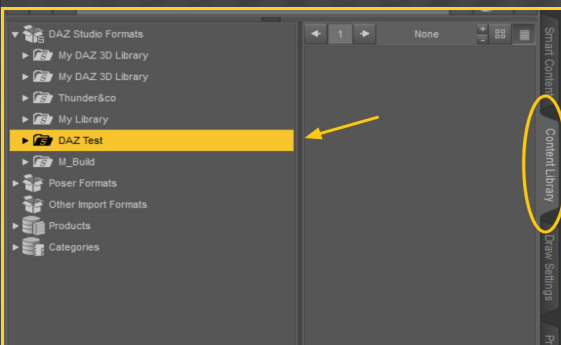

4: "Advanced settings" again, "Installation" tab, check or select your installation folder;

5: Go to the "Ready to Download" tab(1), update the list with the couple of arrows (2), click "Install" (3);

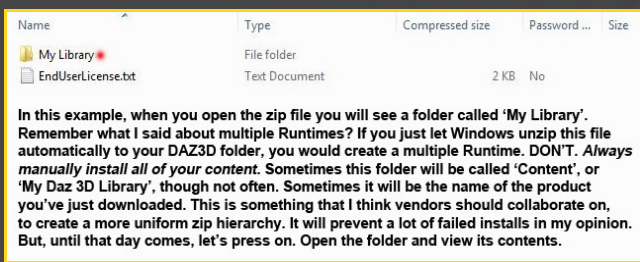

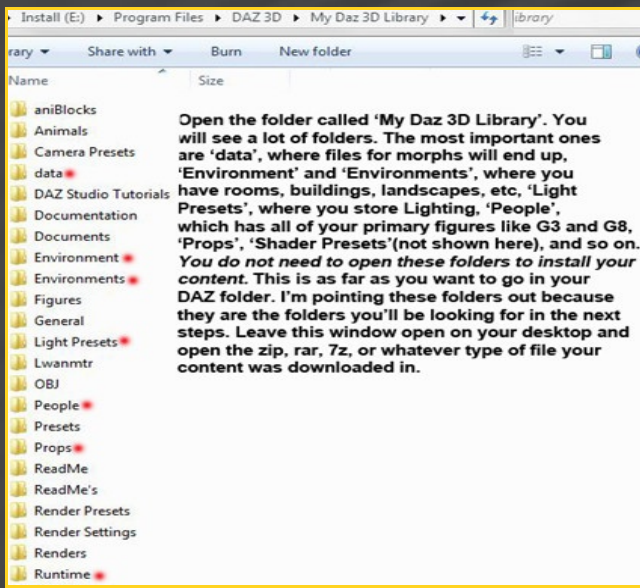

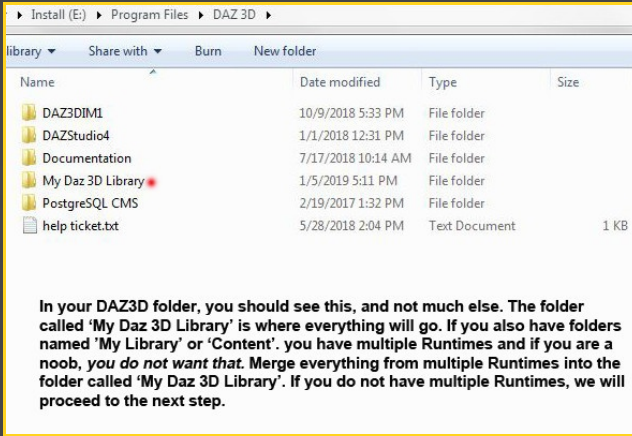

6: Open DS, locate the installation library in the "Content Library" tab.

## B – Manual procedure

For PC users: (instructions courtesy of matt):

For MAC users: (instructions courtesy of Guttersnipe):

1. Locate your "My Library" folder and COPY the unarchived contents of your product by dragging and dropping while holding down the "alt" button.

2. A dialogue will appear.

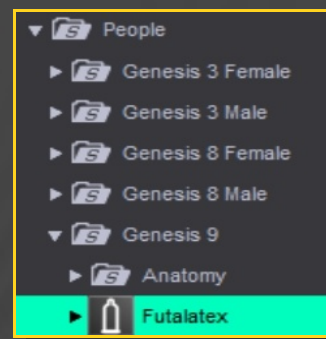

DO NOT PRESS RETURN OR CLICK ON "REPLACE"

This is very, very important – if you do it will delete everything you have in any matching folders.

Instead click on "Apply to All" and then (carefully) click on "MERGE":

You may need to refresh your content library (alt-click on "My Library" and select "refresh" from the context menu) or restart Daz to see your new items.

### 3 - Where is my content?

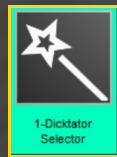

You can access to the graft and presets in your Content Library tab under "People/Genesis 9/FutalateX"

#### 4 – FutalateX on Dicktator and Double Danglers

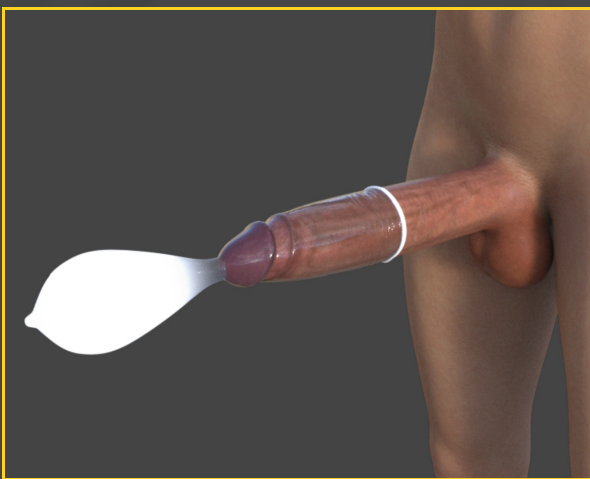

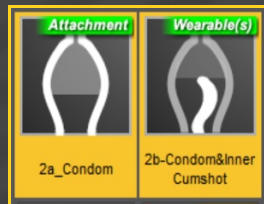

– Load **G9** and set up the *Futalicious* genitalia on it;

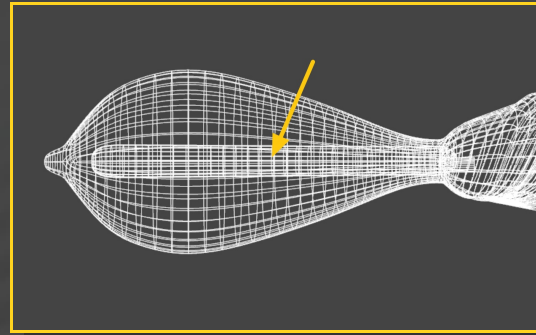

– Select the "Dicktator" genitalia;

– Load either the "Condom" graft or the "Condom & Inner Cumshot" wearable presets:

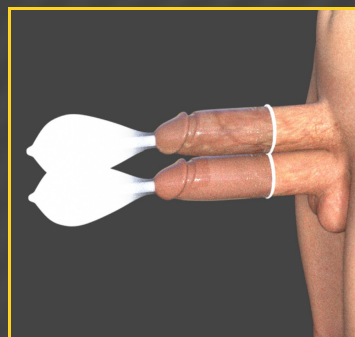

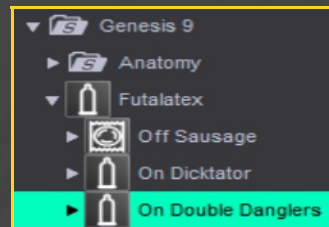

The "Inner Cumshot" adds a follower to simulate ejaculation inside the condom:

The internal cumshot can be shown or hidden selecting G9 or any of its followers and loading the "Inner Cumshot\_Hide/Show" presets:

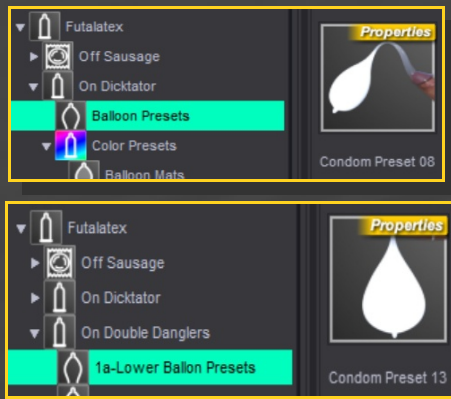

The exact same procedure works with the "Duble Danglers" graft:

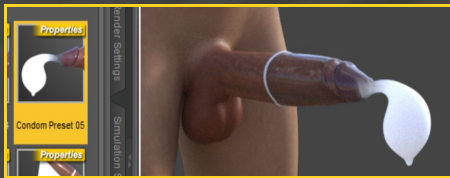

## 5 – Shaping FutalateX

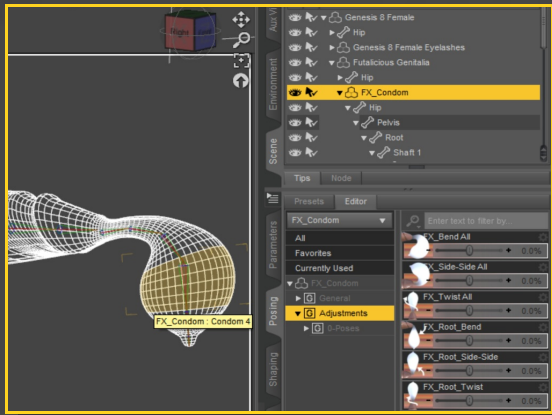

The FutalateX Balloon(s) can be quickly shaped with the presets included in the "FutalateX/On Dicktator/Balloon Presets" or "FutalateX/On Double Dangers/Balloon Presets" folders:

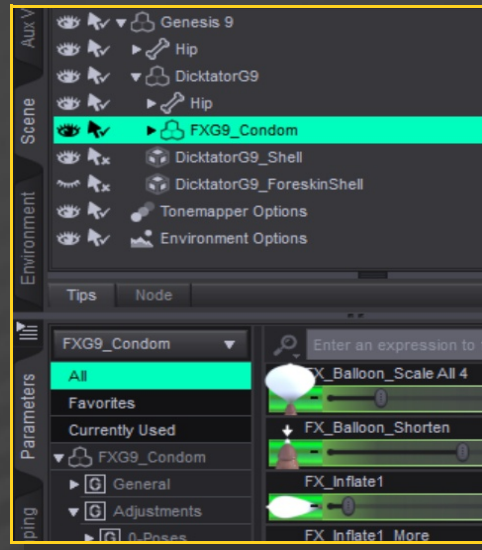

Just select the "FutalateX" follower and inject one of the presets:

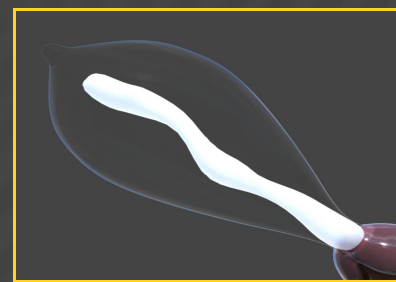

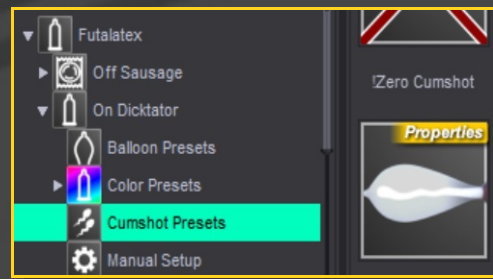

The "FutalateX" balloons include six bones that can be posed and scaled in the viewport or in the "Posing" tab:

For fine-tuning, with "FutalateX" selected in the scene, you can dial its morphs in the "Parameters" tab:

Similarly, you can select the inner cumshot(s) and shape them with the included presets...

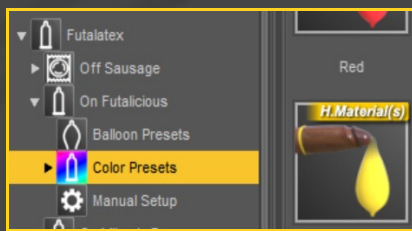

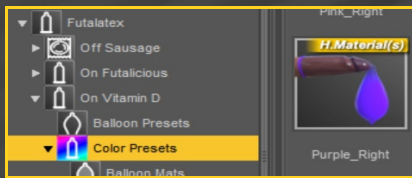

...or with the morphs included in the "Parameters" tab:

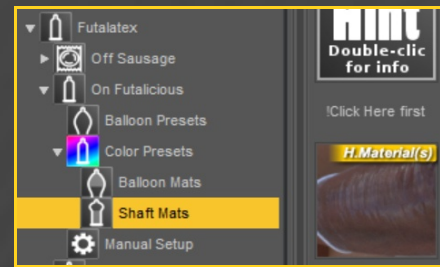

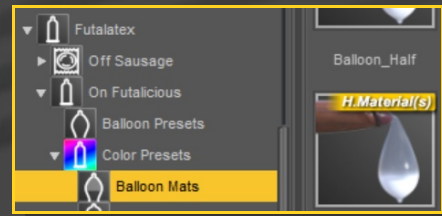

## 6 – Texturing FutalateX

The texturing workflow is layered in two steps.

– First, set the condom color (or keep the default one):

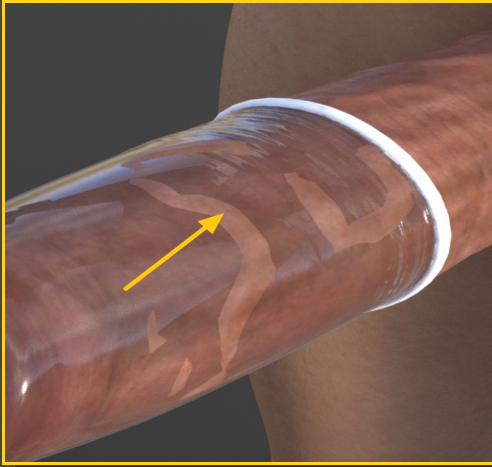

- Then, inject a shaft or balloon preset. It'll keep the color previously injected:

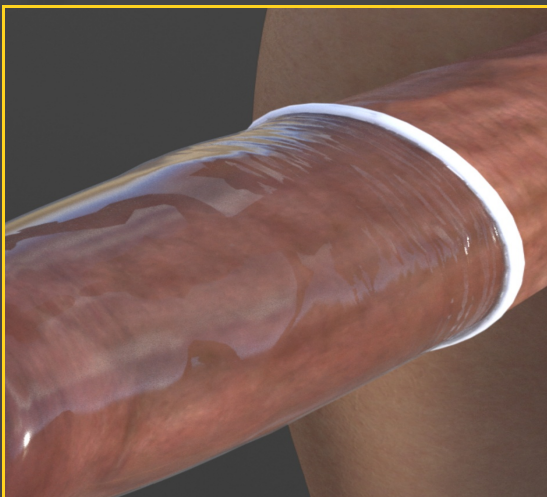

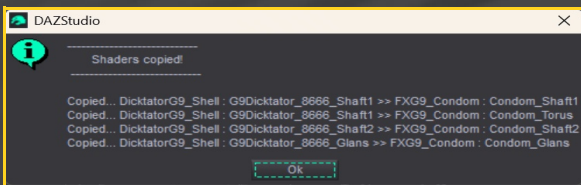

Select G9 or any of its child nodes and inject a hierarchical color preset. The presets will color the internal cumshot as well:

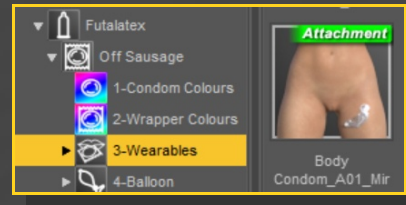

If you have veins displacement loaded on Dictator or Double Dangers, they'll poke through the condom:

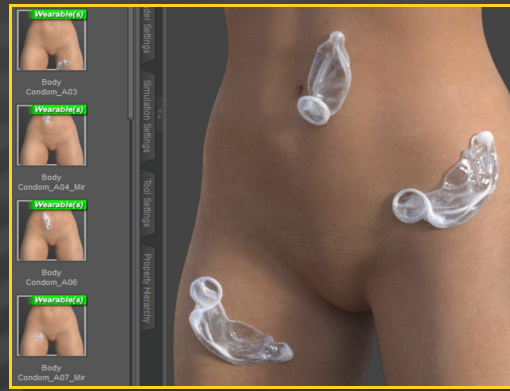

In order to fix the issue, select G9 and load the "Veins Copy" script:

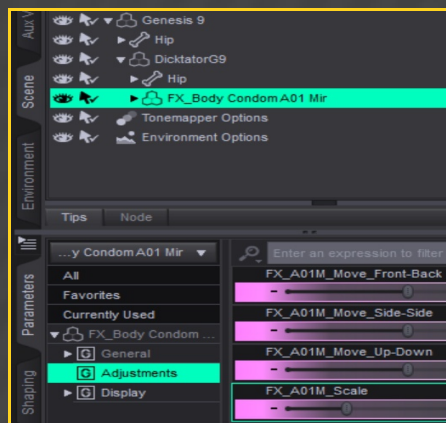

## 7 – Condoms on skin

A wide collection of body condoms followers is included. They lay flat on the skin:

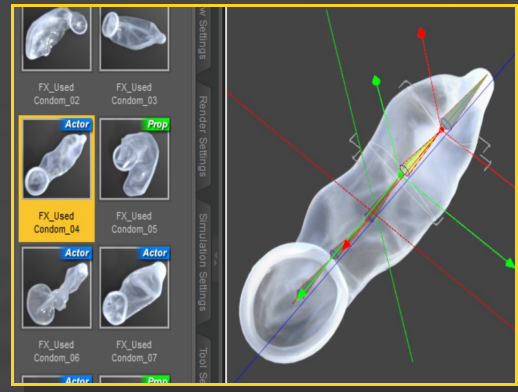

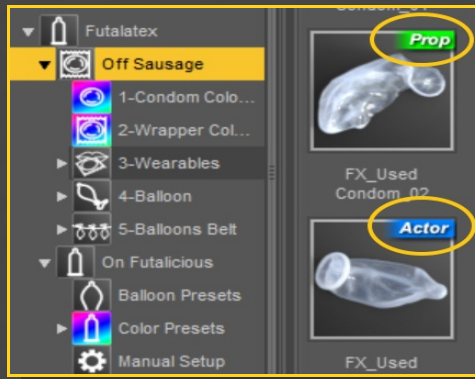

All of them include morphs that can be dialed in the "Parameters" tab:

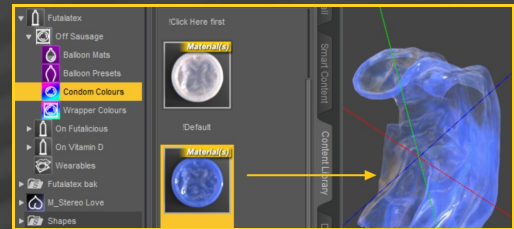

if the main character includes displacement maps (monsters, orcs,...), the followers may 'sink' into the skin. In order to fix the issue, use the moving morphs to push the condoms outside.

## 8 – Standalone props&Figures

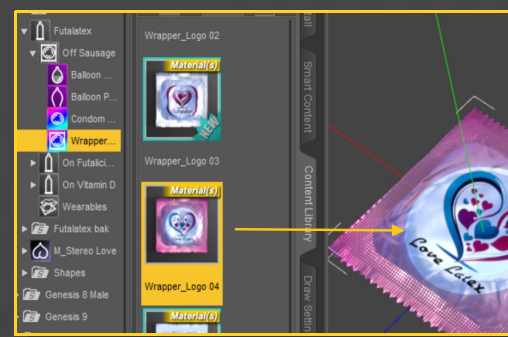

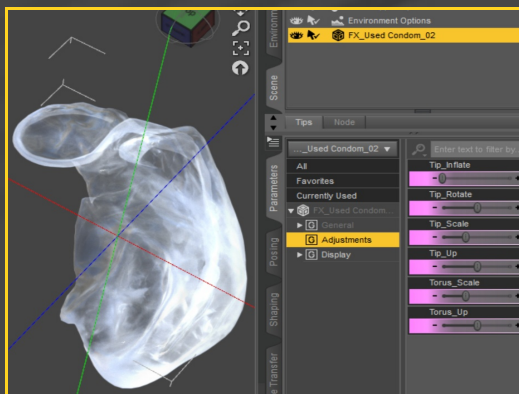

All condoms and wrappers can be coloured with several presets. Just select the asset in the scene and inject the preset:

A collection of standalone *props* and *actors* is included.

All assets include several morphs that can be dialed in the "*Parameters*" tab:

## 9 – Balloon

The "*Balloon*" rigged figure can be loaded as standalone...

The *actors* are rigged and can be posed:

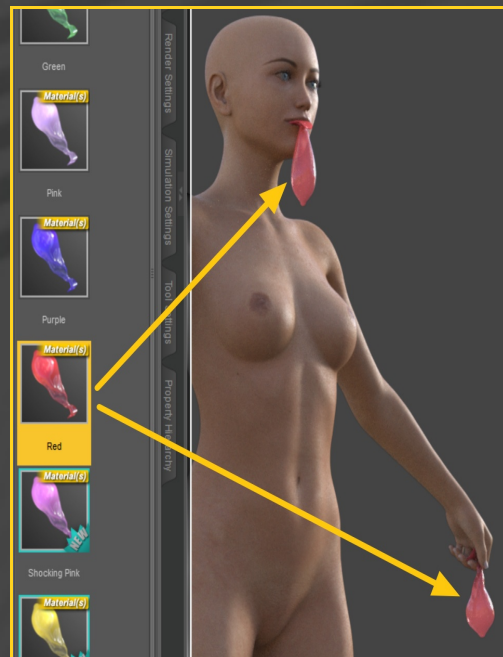

If you want to edit the balloons parented to G9, use the "**Balloon Selector**" script to select them before injecting the mats and shapes:

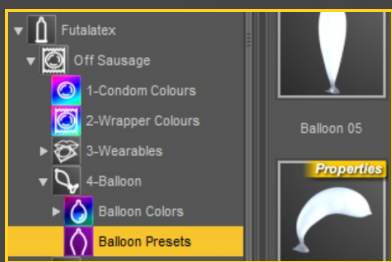

...or parented to G9 (select G9 before loading it):.

If you have more than one balloon loaded on G9, the script will select them all, and the presets will affect them all at once:

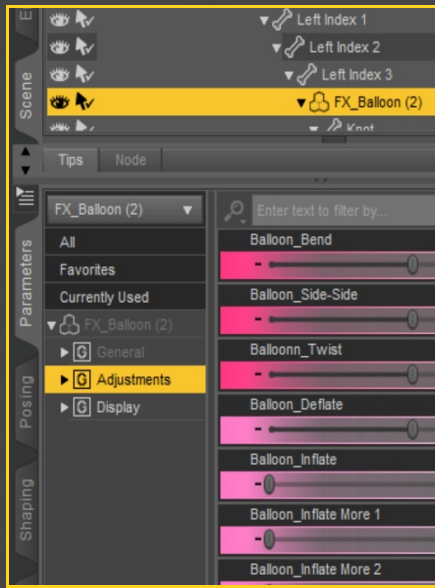

The balloons can be morphed and coloured with the presets included in the subfolders:

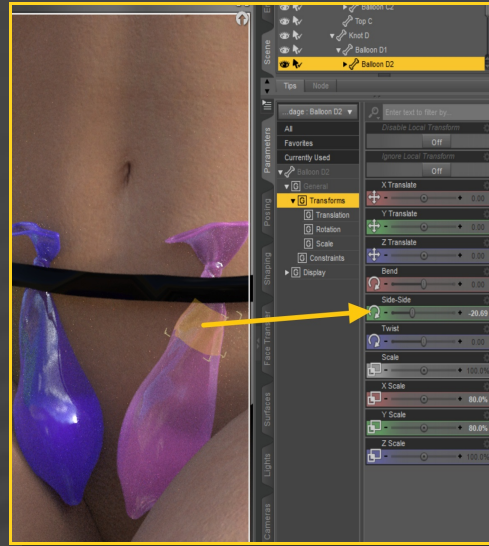

If you want to avoid that, you need to manually unselect the balloon you want to keep untouched.

You may also manually edit the balloons with the many morphs included in the "Parameters" tab:

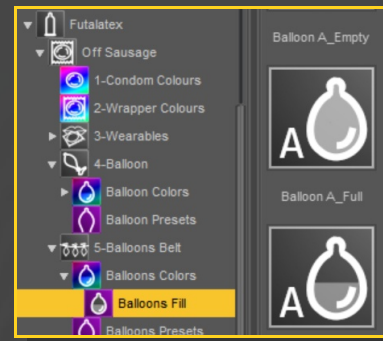

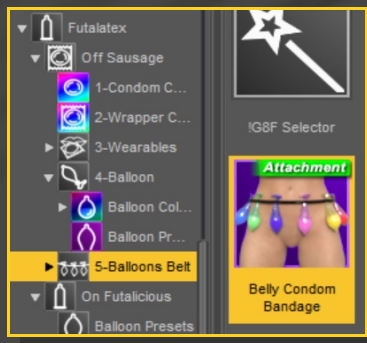

You'll probably have to pose the balloons in order to adjust them to your poses:

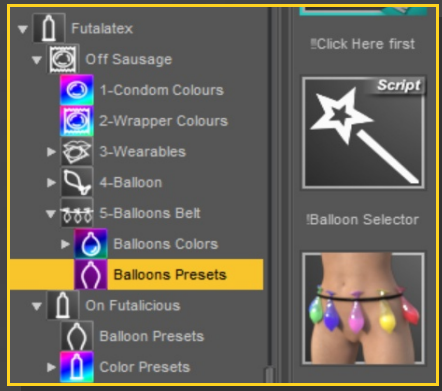

Similarly to Dicktator/DD's "FutalateX", you can first colour the balloons (one by one), then load a filling material. Just select G9 and load a preset:

### 10 - Condom bandage

-The Condom Bandage is a fully rigged G9 follower. Just select G9 and load it:

In order to shape the belt, you can either load one of the presets (use the selector script first)...

...or manually dial the morphs in the "Parameters" tab:
