

INSTRUCTIONS

- Load the Syringe prop with nothing selected in the scene. If you wish to use the Hose prop together with the Syringe, select the Syringe in the scene and then load the Hose prop (it will be automatically parented to the Syringe).

- Pose the props manually or with the help of the sliders. To use the sliders select the prop, go to Parameters Tab/General.

Easy posing sliders of the Hose prop (modifier/pose):

- Roll Full - bends all bones (except the Top and Bottom ones).
- Roll 2/3 - bends 2/3 of the bones.
- Roll 1/3 - bends 1/3 of the bones.
- Twist Full - twists all bones (except the Top and Bottom ones).
- Twist 2/3 - twists 2/3 of the bones.
- Twist 1/3 - twists 1/3 of the bones.

Morph sliders of the Hose prop Top part (modifier/shape):

- Top Style 01
 - Top Style 02
 - Top Style 03
- (Check each slider to see the shapes, use them separately or in combination).

Easy posing slider for the plunger of the Syringe prop (modifier/pose):
Plunger Move - pushes/pulls the plunger inside the Syringe.

Morph sliders of the Syringe prop Top part (modifier/shape):

- Top Style 01
 - Top Style 02
 - Top Style 03
- (Check each slider to see the shapes, use them separately or in combination).

BONUS poses:

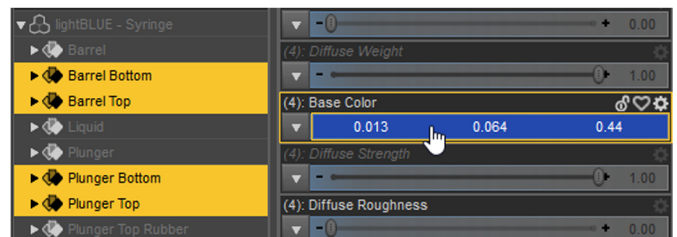

- Pose 01 - creates a scene with two G8.1F figures using the Syringe prop with Top Style 01 applied to it (contains a pose for each of the two G8.1F figures, a pose and a shaping preset for the Syringe).
- Pose 02 - creates a scene with two G8.1F figures using the Syringe prop (contains a pose for each of the two G8.1F figures, and a pose for the Syringe).
- Pose 03 - creates a scene with two G8.1F figures (one of the G8.1F has db xxx's-XX genitalia) using the Syringe together with the Hose (contains a pose for each of the two G8.1F figures also a pose for the XX genitalia, a pose for the Syringe, a pose and a shaping preset for the Hose).

NOTE ABOUT THE BONUS POSES:

The BONUS poses are added to make it easier for you to start posing and to see some of the many possible scenarios in which the props can be used. Both G8.1F figures should be in the default position when the poses are applied (or at least in the same position in the scene). The Hose should be parented to the Syringe (loaded with the Syringe selected in the scene) before you apply Pose 03. Poses should work on G8F, but the face pose controls are different so that part would have to be posed manually.

MATERIALS

Each prop has its own material presets (colors for the plastic parts). Make sure to load the material preset with the right prop selected in the scene. Only the material presets for the liquid are usable on both props, as well as the Liquid ON/OFF preset. Select each prop and apply the liquid material preset. You can select any color for the plastic parts by changing the Base Color property of that surface in the Surfaces tab.
