

# DICKTATOR GENITALIA

UVS

FOR G3M

~~Mini-tutorial~~

## 1- What is Dicktator Genitalia UVs for G3M?

Dicktator Genitalia UVs for G3M is a collection of nine custom Uvs matching popular DAZ characters's ones: Darius 7, Gianni 7, Guy 7, Ivan 7, Kenji 7, Kimo 7, Lee 7, Leo 7, Lucian 7. This set is meant to work with Dicktator for G3M version 0.3+ (not included).

## 2 - How to install it?

Extract the contents of the .zip file into your main DAZ folder, where your G3M content is installed. It may be something like C:\Users\Public\Documents\My DAZ 3D Library.

--> It is important that the **data** and **Runtime** folders are properly installed in your content library folder with the exact path provided in the zip (installing in a sub-folder is a common mistake), otherwise Uvs won't be loaded on the graft!

## 3 - Where is my content?

The Uvs will be installed in Dicktator data folder. If correctly installed, they will be available as UV sets of the Dicktator Genitalia surfaces.

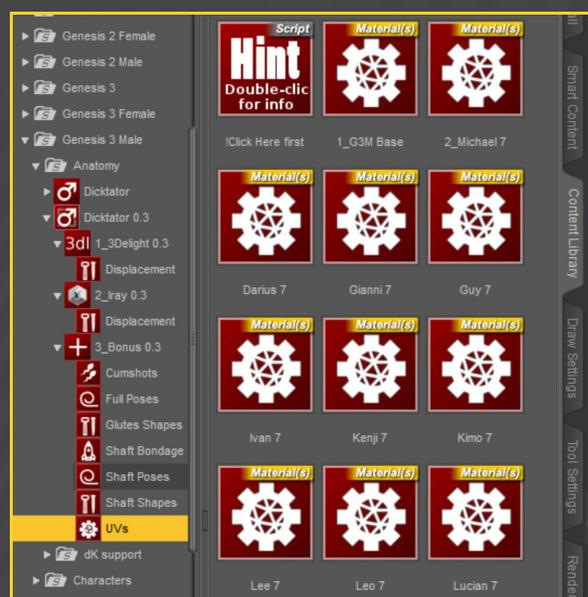

There are three ways to set the Uvs on Dicktator:

1 - The 'Material copy' (version 0.3) script will do all the work for you! It will check if G3M active Uvs have a matching set for Dicktator... if yes, it will be selected on Dicktator, otherwise G3M default set will be kept.

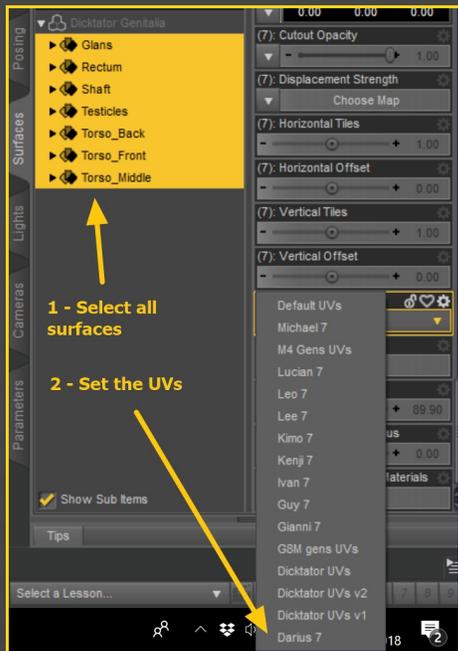

2 - You can set the Uvs sets with the injectors in your Content Library tab. They are to be found under:

People/Genesis 3 male/Anatomy/Dicktator 0.3/Bonus/UV sets.

### 3 – You can set the Uvs in the surface tab:

Note: the nine UV sets included will affect only the textures on the graft. The textures on the shell are mapped on independent UV maps.
