

INSTRUCTIONS

- AUTOLOADING - Select "Genesis 9" in the scene and double-click on one of the AutoLoad & Fit scripts to load and fit the hair prop/s.

(FULL BODY HAIR 01 will load and fit Armpits 01, Arms 01, Bottom 01, Chest 01, and Legs 01)

- MANUAL LOADING - Load the hair prop of your choice and with the hair prop selected go to Parameters/General/Misc and under Fit To choose "Genesis 9" for all body hair props (Armpits, Arms, Bottom, Chest, and Legs) and "db xxx-XY G9" only for XY G9 pubic hair props, this will allow the hair to follow the figure.

If the figure is not a default Genesis or if it is not in the default pose, the hair might not be in the proper position when you load and fit it, in that case, go to the Parameters/General/Transforms and toggle on/off the Apply Transformation option.

Parenting is NOT needed and may cause undesired behaviour!

In order to load materials hair prop should be selected in the "scene" pane. The same material presets are usable on all hair props from this package.

Note: The hairs look more soft and smooth after adding a subD, if this is what you'd like, when you load the hair prop select it in the scene pane/options menu/Edit/Geometry/Convert to SubD.

This will give you Mesh Resolution option in your Parameters tab, and there you will find options to increase the smoothing if you like.
