

LUSCIOUS LASSIE FOR G8M DICKTATOR

~~Mini-tutorial~~

- Copy in it both the zip (do not unzip it) and the dsx files;
- Refresh DIM (couple of round arrows at the top), and enable the 'Ready to Install' tab. Locate the product, and click 'Install'... done!

Remember that in the DIM settings, you can choose the destination library.

1 - What is Luscious Lassie?

Luscious Lassie for G8M is a graft including morphs, textures, cumshots and hair follower. The graft transforms Dicktator into a canine-looking male genitalia.

2 - How to install it? [two possibilities]

A - Using DAZ Installation Manager

- Locate your DIM zip directory: Open DIM, click on the upper right gear, click on the 'Downloads' tab, and locate the Package Archive directory:

B – Manual procedure

Locate your main DAZ folder. It may be something like C:\Users\Public\Documents\My DAZ 3D Library.

Library tab under:

People/Genesis 8 Male/Anatomy/
/Dicktator v3/5_Luscious Lassie

You can access to the dialable morphs in the parameters tab, with DICKTATOR selected in the scene:

Merge the contents of the .zip file with your main DAZ folder, where your content is installed. For MAC users: follow instructions here: <http://www.renderotica.com/community/forums.aspx?g=posts&t=204659&cmsg=0&cmsn=>

---> It is important that the *data* and *Runtime* folders are properly installed in your content library folder with the exact path provided in the zip (installing in a sub-folder is a common mistake), otherwise textures won't be found.

3 - Where is my content?

Typing "LL_" in the parameters tab, with "All" selected is a quick way to access to all the morphs:

4 - Quick setup

You can access to the presets in your Content

✓ Select G8M;

- ✓ From the '5_Luscious Lassie v3' folder, load '1_Luscious Lassie Full' wearable preset:

- ✓ [optional] Select Dicktator Shell from the Scene Tab, and load a Dicktator material preset on it. If you are loading a texture preset from 'Texture Wizard', use only the ones included in the '1_Dicktator UV set' folder; Select again G8M;

- ✓ Load the '2_DCK_LL_Material Copy v3' from the '5_Luscious Lassie v3' folder:

6 – Manual setup

- ✓ Select G8M and load '1_Dicktator Genitalia v3' and Dicktator Shell on it as usual. You don't need to load the '2_Dicktator_Material Copy v3' script.

- ✓ [optional] Select Dicktator Shell from the Scene Tab, and load a Dicktator material preset on it;

- ✓ With Dicktator selected in the scene, load

'Luscious Lassie Genitalia' from the '5_Luscious Lassie v3/6_Manual Setup'

folder;

- ✓ With G8M selected again, load the '2_DCK_LL_Material Copy v3' from the '5_Luscious Lassie v3' folder:

6 – Textures setup [IRAY only]

Select Dicktator Shell, and load a texture / displacement preset on it:

7 – Morphs setup

Select 'Dicktator Genitalia' in the scene and load a shaping preset on it.

You can also mix the presets in the parameters tab (with Dicktator selected).

If you need to pose the shaft 1 bone, do it on Dicktator, not on Luscious Lassie... This way JCM will properly work.

7 – Cumshots

Select '*Luscious Lassie*' genitalia in the scene and load a cumshot preset on it:

8 – Hairs

Select '*Dicktator*' genitalia in the scene and load the hair follower on it. You can change its color selecting '*Luscious Lassie Hair*' in the scene and loading a color preset on it from the materials presets sub-folder.

Hairs will conform with Dicktator genitalia.
