

Pussy Wizard for G9 Golden Palace

~~Mini-tutorial~~

1 - What is Pussy Wizard for G9 Golden Palace?

Pussy Wizard is a texture expansion pack for the Golden Palace Genitalia that allows to colorize separately the labia minora and labia majora on two shells. It works only for the G9 version of Golden Palace. It does not include anus options, as they will be released in the 'Stereo Love' package, sold separately.

2 - How to install it? [two possibilities]

A - Using DAZ Installation Manager

1: Open DIM, select "Advanced settings";

2: Check the Downloads tab (1), locate the download directory (2);

3: Browse to this very directory, drag and drop the .zip and .dsx files you downloaded from Renderotica (if you use a MAC don't click Return or Replace);

4: "Advanced settings" again, "Installation" tab, check or select your installation folder;

5: Go to the "Ready to Download" tab(1), update the list with the couple of arrows (2), click "Install" (3);

6: Open DS, locate the installation library in the "Content Library" tab.

B – Manual procedure

For PC users: (instructions courtesy of matt):

Install (E:) > Program Files > DAZ 3D >

Name	Date modified	Type	Size
DAZ3DIM1	10/9/2018 5:33 PM	File folder	
DAZStudio4	1/1/2018 12:31 PM	File folder	
Documentation	7/17/2018 10:14 AM	File folder	
My Daz 3D Library	1/5/2019 5:11 PM	File folder	
PostgreSQL CMS	2/19/2017 1:32 PM	File folder	
help ticket.txt	5/28/2018 2:04 PM	Text Document	1 KB

In your DAZ3D folder, you should see this, and not much else. The folder called 'My Daz 3D Library' is where everything will go. If you also have folders named 'My Library' or 'Content', you have multiple Runtimes and if you are a noob, *you do not want that*. Merge everything from multiple Runtimes into the folder called 'My Daz 3D Library'. If you do not have multiple Runtimes, we will proceed to the next step.

Install (E:) > Program Files > DAZ 3D > My Daz 3D Library >

Name	Size
aniBlocks	
Animals	
Camera Presets	
data	
DAZ Studio Tutorials	
Documentation	
Documents	
Environment	
Environments	
Figures	
General	
Light Presets	
Lwanmtr	
OBJ	
People	
Presets	
Props	
ReadMe	
ReadMe's	
Render Presets	
Render Settings	
Renders	
Runtime	

Open the folder called 'My Daz 3D Library'. You will see a lot of folders. The most important ones are 'data', where files for morphs will end up, 'Environment' and 'Environments', where you have rooms, buildings, landscapes, etc, 'Light Presets', where you store Lighting. 'People', which has all of your primary figures like G3 and G8, 'Props', 'Shader Presets' (not shown here), and so on. *You do not need to open these folders to install your content.* This is as far as you want to go in your DAZ folder. I'm pointing these folders out because they are the folders you'll be looking for in the next steps. Leave this window open on your desktop and open the zip, rar, 7z, or whatever type of file your content was downloaded in.

Name	Type	Compressed size	Password ...	Size
My Library	File folder			
EndUserLicense.txt	Text Document	2 KB	No	

In this example, when you open the zip file you will see a folder called 'My Library'. Remember what I said about multiple Runtimes? If you just let Windows unzip this file automatically to your DAZ3D folder, you would create a multiple Runtime. **DON'T. Always manually install all of your content.** Sometimes this folder will be called 'Content', or 'My Daz 3D Library', though not often. Sometimes it will be the name of the product you've just downloaded. This is something that I think vendors should collaborate on, to create a more uniform zip hierarchy. It will prevent a lot of failed installs in my opinion. But, until that day comes, let's press on. Open the folder and view its contents.

Storage (D:) > Downloads > DpSpc3D_MS_Bukkake_1.zip > My Library >

Name	Type	Compressed size	Password ...	Size
data	File folder			
People	File folder			
ReadMe	File folder			
Runtime	File folder			

This is the honeypot. This is your content. In some cases, when you open the zip file this is what you see right away. Sometimes not. In any case, these are the folders you will be manually installing to your 'My Daz 3D Library' folder that we looked at earlier. You left that window open on your desktop, right? No? Dingus. Reopen it. Now, select all of the folders and drag them either all at once or one at a time to their new home, which is called 'My Daz 3D Library'. You will have prompts asking if you want to merge folders. Say Yes. If it is an update, you may have prompts asking if you want to overwrite files. Again, say Yes. Let it run its course, and that's it. You're done and your content is correctly installed.

Remember, *never let Windows unzip and install the content for you.* Never! Always use manual install, unless you are installing content through DIM that you've bought through DAZ, and your DIM is correctly set up. If it's not, consult the boards over at DAZ on how to do that. I know Meipe has recently started creating files to install though DIM, and I think that's a good thing, but the vast majority of what you buy here or at 'rosity will require manual install if you want it placed where it should be.

3 - Where is my content?

You can access to the material presets in your Content Library tab under **People/Genesis 9/Anatomy/Golden Palace/01-Material Presets/Pussy Wizard**

4 – Quick setup

- Set up Golden Palace as usual:

- Load one of the full human presets, one for the labia minora, one for the labia majora. All presets are hierarchical, so just select any of G9's nodes and they will load on the geoshells.

The human presets won't affect the "Shell_Addons". All presets in the package will only load on the genitalia, the anus won't be affected.

Some presets for wild characters are included. They affect the "Shell_Addons", and they load all at once on the three geoshells:

You can add some glow to the labia minora and vagina:

You can also build your own presets or edit the previous ones with the options included in the '**3-Labia Majora**' and '**4-Labia Minora**' folders:

You will need to separately load color, outline, and eventually blend, and glossiness options.

If you want to improve the look caused by stretching the legs, You can use the "**Fix Legs Stretch**" script:

5 – Shell issues

When you load a graft unsupported by the shell, its new surfaces will be white. So, for example, if you use Breastacular with the Golden Palace and all their shells, remember to clean them all with the Shell Fix v3 Script, that can be freely downloaded from Renderotica: https://www.renderotica.com/store/sku/71962_Shell-Fix-V3
